Features

- Calibrated pressure sensor for absolute pressure measurement
- Temperature and supply voltage sensor
- 8051 based microcontroller
- Standby current 0.25uA
- RF Transmitter 433MHz/315MHz integrated
- External accelerometer
- Support LF programming
- Absolute Pressure range:900kPa/1900kPa

General Description

The SNP705X is a sensor for air pressure measurements designed for TPMS (Tire Pressure Monitoring System) applications.

Applications

- Tire Pressure Monitoring System
- MEMS sensor

Key Parameters

Key Parameters		Comment
RF		
Frequency	315 / 433.92	MHz – programmable about centre freq
PA	On chip	3.5 ~10 dBm output power
Modulation	ASK / FSK	
FSK deviation	90	KHz – programmable
Format	Manchester	Mark/space also supported
LF (Wakeup, Programming)		
Format	Manchester	OOK & PWM also supported
Format speed	3.9/6.5	Kbps
Pressure		
Sensor resistance	20 to 3.3	KOhm
Main measure	ADC	12 bit
Temperature		
Temperature	-40~125°C	
On chip oscillator		
frequency	4/39/2000	KHz
Micro		
LF decoder	Fuzzy	Improves noise and distortion performance.
Flash	16	Kbytes
RAM	384	Bytes
GPIO	3	
Other		
Package	LGA 24Pin	SIP (System In Package)
Battery Supply	2.1~3.6	Volts

1 Introduction

SNP705X consists of 16KB Flash memory, interrupt bus, configuration registers and control bus which operate the analogue circuitry all of which are controlled via a 8-bit integrated microcontroller. The micro is clocked by a tunable oscillator with a selectable center frequency. The motion detection is achieved via external accelerometer.

Measurements of pressure, temperature, and battery voltage are performed under software control, and the data can be formatted and prepared for RF transmission by the microcontroller. A software defined wakeup mechanism is developed for minimizing power consumption. An Interval timer controls the timing of measurements and transmissions. The circuitry can be programmed to wake up at regular intervals or it can be woken up by the integrated LF Receiver, which furthermore enables the sensor to receive data.

The LF receiver supports wireless Flash programming to the chip with no need of I2C communication which demonstrates high efficiency in customer firmware development phase.

The integrated microcontroller is instruction set compatible to the standard 8051 processor. It is equipped with hardware Manchester, bi-phase encoder/decoder and CRC generator and checker, which enable easy implementations of customer specific applications.

The low-power RF Transmitter for 315 and 434 MHz contains a fully integrated PLL synthesizer, an ASK/FSK modulator and an efficient power amplifier.

The accelerometer interface can support external dual-axis accelerometer to detect tire roll status.

On-chip Flash memory is integrated to store the customer specific application program code, the unique ID-number of the sensor and the calibration data for the sensor. Additionally flash embedded library functions developed by SENASIC cover standard tasks used by the application.
